

## NEWS FLASH: PARTICLE COUNTER USED FOR LUBRICANTS. AUGUST 2010

Our quality control laboratory is using the Spectrex Laser Particle Counter to measure particles in lubricants. Before purchasing, we shopped around and found no other system comparable to the Spectrex counter. Unlike other instruments, we are able to calibrate the Spectrex counter in-house which saves us both time and money. The instrument's software is easy to use and understand so new technicians are able to start using the instrument after only a short training demonstration. From installation to new method development, the technical support and guidance we've received from Spectrex has been exceptional. I highly recommend the Spectrex Laser Particle Counter.
