

SPECTREX PARTICLE COUNTER IN COMPARISON WITH HIAC (HACH).

A US based chemist writes:

"We did some testing, comparing your unit with the HIAC LPC and, after subtracting out the baseline for clean chloroform, we got very comparable results. It seems that the Spectrex unit shows the chloroform to have more particles than the HIAC measures but, when accounted for (subtracted out), the particle count of the chloroform with the dissolved resin is quite similar for the two instruments." .
