

Using the Spectrex particle counter in off-shore oil drilling rigs, The latest comments by a user off the African coast.

"We are using the particle counter to check the hydraulic fluids for sub sea valves and the sub sea chemicals like asphaltene inhibitor, scale inhibitor, etc on the offshore rig. The chemicals should be of the quality to match NAS 6 or better to inject into the Sub Sea. Some of the chemical are water soluble and others oil soluble."

Note that the Spectrex can be used for both water based and oil based liquids.
