THE VREELAND SPECTROSCOPE, A GREAT TEACHING TOOL.

"Today was my final which included doing an unknown on the Vreeland. There were multiple hearths made up of either Cu, Zn, or Mn. The students had no problem with the Vreeland except some of the girls were afraid of striking an arc. It was a joy to me to have many of them look in the Vreeland and say with confidence what their unknown was.

I took a survey about which lab the students like the best and a majority like emission spectroscopy which included the Vreeland."

Tom Ameen, community college professor
