

OUR PARTICLE COUNTER USED FOR WATER UNDER OIL AND GAS EXPLORATION November 2011

I agree with you that Spectrex has a fairly good agreement with gravimetric methods of calculating Total Suspended Solids. We had a pilot project wherein we needed a water analysis on site and Spectrex helped us a lot, with more accurate results than the other methods used.

I have your quote for the Spectrex unit. We may be having another pilot project going in early next year for which we might need to purchase our own Spectrex unit. Yes. Spectrex seems to be a lot more accurate and easier to handle than alternatives.
