

Compressor Oil Analysis, avoiding cross contamination from previous samples.

Our company purchased our Spectrex particle counter eight years ago. The main purpose for this purchase was to accurately derive particle counts on **hydraulic and compressor oils** that we receive on a daily basis. Another reason for its purchase was that it would allow us to obtain counts without any cross contamination from previous samples.

After using it for a while we realized that there were even more advantages one of which was the ability to store test results and the ease of tracking previously run data for a QC cleanliness program that we operate for one of our customers. This was indeed fantastic.

The dependability of the unit running every day for eight consecutive years without fail was also a benefit along with the friendliness of the staff to solve any minor problems that we might have incurred. I highly recommend the Spectrex Corporation and its particle counter to any potential user.

Sincerely, ____ Maintenance Systems, Manager, Oil Services
