

## **MONITORING CLEANING EFFECTIVENESS USING THE SPECTREX PARTICLE COUNTER**

"We have been using the Spectrex particle counter for many years now. We have used it to establish control points and monitor our cleaning effectiveness on both metals and glass, we had an interesting incident back in September when the daily result from the particle counter spiked, this spike was followed by a major performance issue with our product.

We now have a direct correlation between particle count and product performance, the data provided from this test is now closely monitored.

We appreciate all the support we get. Thanks for providing such a reliable and effective piece of test equipment.
