

OIL APPLICATIONS FOR THE PC-2200 PARTICLE COUNTER

MONITORING OIL FILTER OPERATIONS

Dennis G. Moreland
Moreland Oil Co.
Filtration Division

I have been using the Spectrex PC-2000 Laser Particle Counter for the last three years and am convinced that this equipment is by far one of the best units available for our type of operation. We currently use this to monitor our oil filtration operation and have found the savings to not only be the cost of continued sampling to meet target oil cleanliness specifications, but also the time savings we have as our results are recorded in minutes. This helps my company utilize our filtration equipment as we do not have to wait days for results to return from other labs. The compact size of the particle counter makes it very portable and easy to take to a customer location to monitor our filtration progress. The operating system that accompanied the particle counter was easy to install on the computer and was very user friendly. The service and support you and the staff at Spectrex have supplied for technical assistance and routine test calibration far exceeded our expectations. They were extremely helpful getting us started and making sure we were well aware of the testing capabilities of this particle counter. I would highly recommend Spectrex to any company that is in the market for any of the multitude of test equipment that this company manufactures. With the product quality, support and competitive cost, the Spectrex laser particle counter is by far the one of the best overall packages available.

Sincerely,

Dennis G. Moreland, President
Moreland Oil Co.
