Spectroscope Evaluation by Baron Mining Corporation

Spectrex Corporation
3580 Haven Avenue
Redwood City, CA 94063

Gentlemen:

In 1982 the board of directors recommended that a spectroscope be included as one of the pieces of equipment to be purchased for Baron's new Research Laboratory. Subsequently, after due comparisons, a Vreeland Spectroscope with the quantitative and TV camera attachments was purchased. The machine capabilities, its reasonable price, and the courtesy we were extended by your helpful staff all figured into the reason for our purchase of the Vreeland.

My Father used to say that a debt of praise is a morally binding as a monetary obligation. Please accept our apologies for being late on this due bill. Your equipment deserves a repayment of standing ovation.

Our lab has utilized the Vreeland extensively up to its capabilities. The TV camera has proved invaluable as it provides, via TV and VHS, repeatable mass information to our technical staff concerning the elements also contained within the precious metal ores that are being worked. As a direct result of this information we have saved thousands of dollars in the development of proprietary formulas which are utilized in assaying as well as production percentage upgrades.

Baron is proud of our well equipped laboratory which contains a multitude of expensive specialized pieces of equipment but we find the Vreeland Spectroscope to be our most valuable machine from the standpoint of cost versus information received. The general information, quickly available, coming from the spectroscope, compliments and shortcuts many time consuming procedures.

We are highly pleased with our Vreeland Spectroscope and would not consider the operation of our laboratory without it. Thank you for building such a fine, trouble free and functional piece of equipment. You are appreciated and praised!

Sincerely yours,

Reith D. Brecheisen
President
